

**Royal White Redbud**  
*Cercis canadensis 'Royal White'*

Height: 30 feet

Spread: 25 feet

Sunlight: ○ ●

Hardiness Zone: 6a

Other Names: Eastern Redbud, Judas Tree, Love Tree

**Description:**

A spectacular spring bloomer, with abundant and very showy white flowers, held tightly on bare branches in early spring; rivals any small ornamental tree for specimen use in the home landscape

**Ornamental Features**

Royal White Redbud has white pea-like flowers along the branches from early to mid spring before the leaves. It has forest green deciduous foliage. The heart-shaped leaves turn buttery yellow in fall.

**Landscape Attributes**

Royal White Redbud is a deciduous tree with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance tree, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Royal White Redbud is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

## **Planting & Growing**

Royal White Redbud will grow to be about 30 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
